

# MagicFont

## Font Management

### Configurable to Your Specifications

#### MagicFont – Overview

#### Easily Manage Your Fonts with MagicFont!

MagicFont is a Yellow Magic companion product designed to make directory publishing just a little bit easier and a more predictable.

In a nutshell, MagicFont identifies and eliminates the font issues often encountered when your output files arrive at your printing company with fonts the printing company either does not have or can't use because they are incompatible with their fonts.

When this happens, font substitutions may occur that may change the appearance of your page or ad, or that may even delay the printing process and prompt a call for advice from your printing company. With MagicFont you can eliminate these font issues.

Bring MagicFont in house and use the program to scan Yellow Magic or Sleight-of-Hand PostScript files *before* sending the output to the printer. When you run this program, MagicFont analyzes and embeds necessary PostScript fonts within the file.

MagicFont keeps you one step ahead by providing the tool you need to resolve font issues before they become an issue—saving you both time and money.

#### MagicFont Benefits:

- ◆ Detect Unknown Fonts Prior to Imaging
- ◆ Analyze, Identify and Embed PostScript
- ◆ Fonts in Your Output File
- ◆ Create PDF Files

MagicFont is highly configurable and can meet your specific needs. The program uses a "two-pass process" on a PostScript file.

On the first pass, MagicFont analyzes and identifies every font (even those embedded in your ads and logos). Once complete, the font information is displayed. You decide whether or not you want the fonts embedded in your output file.

***Let MagicFont Scan your Files Before Sending the Output to the Printer— And Stay One Step Ahead of Resolving Any Font Issues!***
